

LEVELITER LAMP REPLACEMENT

TOOLS REQUIRED:

- Phillips screwdriver

1. Turn off/unplug and allow to cool before replacing lamp. Lamp gets HOT quickly!
2. Carefully remove the 4 main screws with a Phillips screwdriver.
3. Being careful not to scratch the fixture's finish, remove the plate and lens.
4. Inspect the gasket - replace if necessary.
5. Use a soft cloth to remove the lamp. It could be HOT.
6. Inspect the sockets. If necessary replace them. Remove the lamp by pulling upwards.
7. Replace lamps pushing downwards, make sure you align the pins with the small holes on the socket. Replace with LO2036 (standard) or review spec on cut sheet. Do not touch the lamp at any time...handle only the reflector portion of the lamp. Use a soft cloth. Oil from skin may damage lamp.
8. Replace plate and carefully replace the 4 main screws. Do not over tighten.

Do not operate this fixture with a missing or damaged lens.
